QRS

Quick Recovery Solutions

Increasing your surgical volume, improving clinical outcomes and growing your facility's bottom line are a collective effort.

By working with Maxx Orthopedics, your team will gain a partner that will deliver efficient and profitable solutions throughout the entire outpatient arthroplasty episode of care. Your success is our goal.

It is time to remove the clutter and sharpen the surgical flow—join us.

Your outpatient surgical solution

Rethinking Orthopedic Care

The key to building a successful outpatient strategy starts with planning and standardizing. When you partner with Maxx Orthopedics, you'll receive customized solutions combined with a complete product portfolio tailored to help you succeed.

Pre-Op and Preparation

- QRS Recovery™
- Personalized sizing
- Procedure personalization

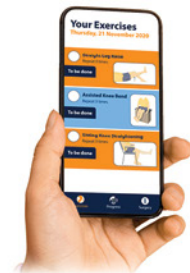

Surgery

- Quick Tray™
- Freedom Knee™
- Libertas Hip™
- Ancillary services

Post-Op and Homecare

- QRS Recovery™
- Compliance monitoring

Reduce instrument processing costs by 65%.⁴⁻⁶

Optimized Instrumentation

Demand less.

Our Quick Tray™ is a single tray instrument system that is customized to your surgical instrument preferences. All extraneous instruments are removed, creating a more streamlined experience for the whole team. Leaner surgical processes in your operating rooms can improve your bottom line.

- Reduce staffing needs due to decrease in instruments, trays and implants
- Increase room turnover rates for more patient throughput

Traditional Freedom Knee Instrument Kit

Freedom QRS Quick Tray instrument Kit

Better pre-operative preparation may increase patient compliance by over 90%.⁵⁻⁸

Pre-Op Patient Engagement

An engaged patient is a successful patient.

Provide personal support to your patient with your customized QRS Recovery™ app. Through the QRS Recovery app, your patients become active stakeholders in their surgical journey. With your team's virtual guidance, patients:

- Attend virtual education classes
- Access their care team
- Receive reminders to prepare them for surgery

Moreover, your facility will save valuable time and money through virtual patient monitoring to ensure patients have cleared all requirements for surgery.

Why be only as good as a coin flip when you can be 98% accurate?⁴

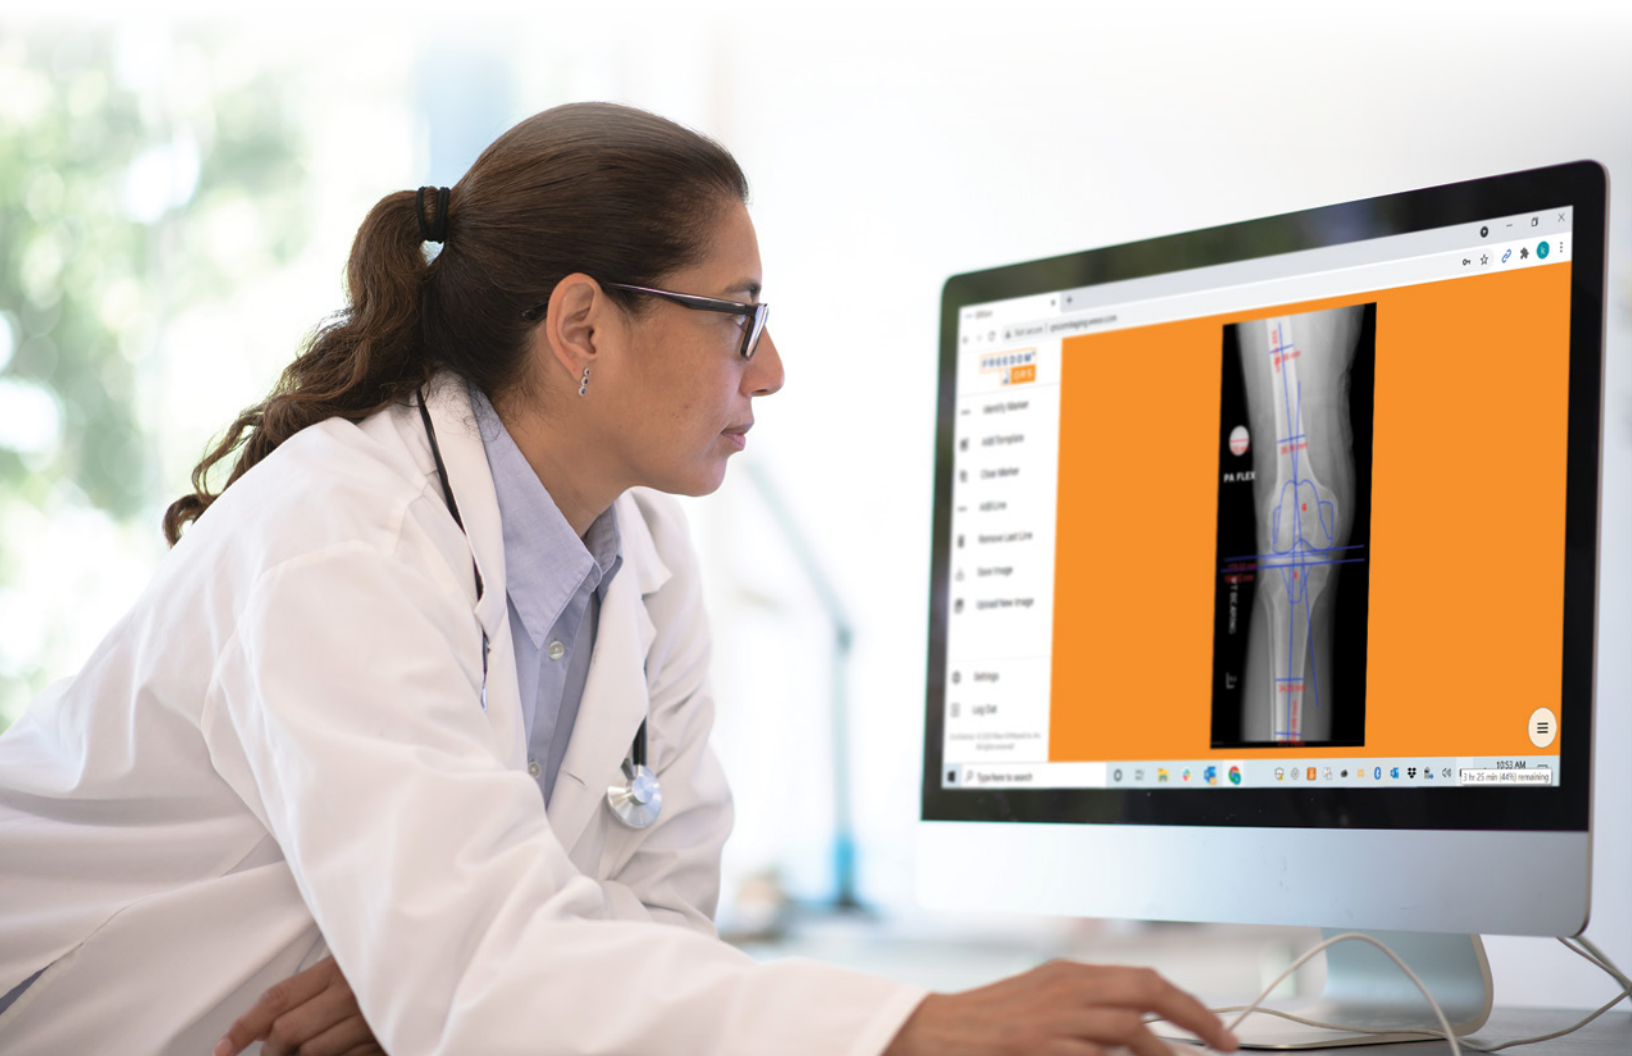

Case Planning

Save time.

Preoperative planning with Maxx QRS Sizer™ helps maximize OR productivity. Our X-ray based, cloud-powered technology helps guide your staff in case planning and implant sizing.

The result? Having the sizes you need for every case—without the clutter of implants that you don't.

Eliminate up to 90% of reserve component stock.⁴

Logistics

Less is better.

At your facility, every square foot costs you money. With QRS, we don't require component cabinets, or storage rooms. Using QRS, everything your team needs for one case is delivered "just in time" and in just one box. When the case is over, simply return the unused components.

Reduce operating room utilization expenses by over \$500 per case.^{4,5,7-8}

Operational Efficiency

We're more than metal.

QRS can help you create a less cluttered, more efficient and more profitable operating room. Our collaboration with your team results in reducing the hassles of SPD inefficiencies, improving room turnover time and reducing inventory management. We can reduce your costs associated with support services, so you gain time and money.

Increase patient rehabilitation compliance up to 95%.⁴

Post-Op Patient Recovery Program

Improved physical therapy compliance equals better outcomes.

With your customized QRS Recovery™ app, your patients will have access to a customized virtual recovery program that will help your team track compliance, pain scores and functional improvement. The QRS Recovery app will help your team:

- Reduce post operative complications through earlier interventions
- Provide patients “one-to-one” care at the push of a button
- Encourage patients to follow post-op exercises and track progress through auto-reminders, monitoring and result recording in real time

Transitioning to Outpatient Surgery

Shifting your practice to an outpatient setting provides ownership in decision-making across all aspects of healthcare, from staffing efficiencies to improving patient care to structuring viable supplier agreements. Building a profitable outpatient service line also requires thinking outside the box and building innovative partnerships. We help make this transition easier through:

- Our surgeon visitation program, where you can meet with outpatient leaders to discuss best practices, exchange ideas on market dynamics and better understand surgical workflows in an outpatient setting
- Staff education and onboarding programs to improve facility efficiency through QRS
- Marketing support with custom direct-to-patient flyers, advertising and social media

Best-in-class Orthopedic Solutions

Driven by research and boosted with innovation, we are committed to providing the most creative, affordable, and efficient solutions to our surgeons. Our comprehensive Freedom Knee® and Libertas Hip® portfolio offers a variety of component and size options enabling you to provide patients with the best arthroplasty solutions without compromise every time.
